- preliminary and definitive planning;
- projects graphic communication;
- site inspections;
- research activities.

about me

As a versatile architect •
with 5 years of professional experience, I have applied
my skills across various architectural domains, from
interior design and building scale to urban planning,
landscape and territorial design.

In addition to Design, I have worked in Construction •
Management and Safety Coordination and actually serving
as Project Engineer for a leading Italian construction company
renowned globally for its 90-year expertise in infrastructure
and civil engineering.

My exposure to diverse project scale, different contract values and complex tasks has enabled me to develop •
a flexible and dynamic approach, adapting to distinct requirements. My classical education has also fostered
out-of-the box thinking and a deep interest in processes and patterns
throughout the production cycle.
