EDUCATION

- 09/2018 - 21/07/2021 **Master's Degree** in Architecture Construction City Politecnico di Torino (Italy)
110/110 cum laude
- 08/2019 - 09/07/2021 **Double Degree** program with Tsinghua University - Beijing (China)
- 10/2015 - 07/2018 **Bachelor's Degree** in Architecture Politecnico di Torino | 108/110
- 2015 High school **Diploma**
Scientific fields 100/100

LANGUAGE SKILLS

italian	Mother tongue
english	B2 (IELTS BRITISH COUNCIL 2018)
mandarin	beginner
french	beginner

SOFTWARE SKILLS

operating system	Ms Windows
2D/3D	AutoCAD, SketchUp, Rhino
rendering	Vray, Lumion, Enscape
graphic	Adobe Photoshop, Illustrator, InDesign
BIM	Revit
lighting design software	DIALux

WORK EXPERIENCES

10/2021-up to present

Internship

BMquadro Architetti | www.bmquadro.com

In this job opportunity, I mainly dealt with deepening in detail final projects, therefore with the choice of materials, finishes, furniture, thus deepening the design philosophy in the insertion in a context in the case of designing exteriors and the qualitative analysis of the spaces generated in the case of interior design, both for public and private use. This result was achieved thanks to an accurate three-dimensional modeling of the project and the return of images using rendering software. I studied in detail the technological stratigraphy of the building surveyed in 1:10 scale and all the processes included in the energy requalification of a building. The activity also involved the production of technical drawings for the construction site, also as regards the custom-made furniture.

03/2018 - 06/2018

Internship

Blaarchitettura studio | www.blaarchitettura.it

My activity required the creation of 1:50 scale maquettes and 1:20 scale details of projects carried out and in progress with materials that would make visible the insertion of the intervention designed by the hosting studio in the existing building, thus deepening the design philosophy. During the creation of maquettes concerning ongoing projects, I was able to contribute to the design of particular technological aspects. In the second phase, I dealt with a real estate unit registered in the Land Registry with the related floor plans, from which it was possible to deduce, in accordance with the cadastral rules, contours, subdivision and destination of the internal rooms, metric data and other information. In the third phase I took care of drawing the current state of a new project in 2D to allow the design of the new intervention.

PUBLISHED WORKS

- 07/2021 Master's Thesis worthy of mention "Metamorphosis between Limits: Possible solution for urban revitalization of the Xi'an Railway Station area".
